Mirror Trims

Stylmark’s Mirror Trims offer beautiful options for protecting and trimming mirrors and mirrored walls. Our J-Molding may be used at the top and bottom of a floor to ceiling mirror application. When a horizontal or vertical accent is required, use one of our two Division Trims. Mirror Trim products may be ordered in 12 foot stock lengths, or pre-cut to your desired length.

To install, simply position the mirror into the top channel, and then lower it into the bottom channel.

Divider trims are supplied slotted with holes for adjustability and rapid installation.

Stylmark’s J-Molding and Divider Trims feature a raised ridge to protect the mirror backing.
Mirror Trims

Part #420110: Corner Column Trim with slots
Part #120063: Corner Column Trim without slots
This Mirror Trim features slotting measuring 9/64” x 39/64”. Slots are set 1” on center, beginning 18” from one end and continuing for another 66”. It accepts Capital B-line (2300 series) and Crown Le-Mans series brackets (by others). This molding will not accept K.V. Bracket 160 or 161.

Part #410466: Recessed Trim Base
Design a mirrored wall with your favorite Stylmark Trim Maker shapes. By using this recessed trim base, a 1/4” mirror fits perfectly between your wall and our trim. See our Architectural Trim and Moldings brochure for choices of trims.

Part #110184*
1 1/2” Radius Cover Trim
This trim allows you to soften a harsh corner while providing a durable and protective edge.

Part #120064
1 1/2” Radius Column Corner Trim
This Mirror Trim provides a radiused corner with stepped reveal and has been developed especially for 3/4” panels.
